

Faculty and Staff, join us for a Lunch and Learn session about

Apple's new iMac: The Ultimate Lab Computer

Date: Thursday, March 6, 2008

Time: 12:00PM - 1:00PM

Location: MC 2066

Lunch and refreshments will be provided. Please RSVP to Kathryn at k4king@uwaterloo.ca or ext. 36143 by Friday, February 29.

With the introduction of Leopard for Mac OS X, Apple now provides a supported ability, BootCamp, to natively boot alternative operating systems including Windows XP and Vista. Now the iMac can be used as the ultimate multi-use lab computer.

Any lab outfitted with the new sleek and stylish all-in-one iMac, not only makes your lab look cool, it gives you a high performance workstation that can run any software now and in the future (Mac, Windows, Unix). Students can quickly reboot to the OS of their choice while the computer remains completely locked down and managed centrally. Idle machines can also be used as a high performance grid computer.

Now there is no need to have different lab configurations for different users. With over a third of the UW student population using the Mac, labs can have higher utilization at lower costs. All student and course needs can be satisfied with one lab configuration.

Join us for a live demonstration and discussion of this new capability.
